

HACEY GLOBAL

Make complex transformation work in practice.

Strategy / Technology / Programme Delivery / Adoption / Capability Transfer

Austin, Texas, USA | Established 2007

One accountable path from decision to durable change.

HACEY Global is a strategy, innovation, technology and programme delivery organisation. We help leaders understand complex organisational challenges, design the right response and carry it through implementation, adoption and measurable improvement.

Our work begins with the organisation - its people, processes, systems, objectives and constraints - rather than a predetermined platform. We combine advisory perspective with practical delivery and build the internal capability required to operate and improve the solution after implementation.

Strategy and implementation should reinforce each other. Technology should fit the work. Adoption should be visible in performance. Capability should remain after the engagement.

01 Strategy Define the case for change, operating model, investment choices and executable roadmap.	02 Technology Select, build and integrate technology around real workflows, architecture and risk.
03 Programme delivery Create the governance, delivery rhythm and controls that keep complex work moving.	04 Adoption and capability Prepare teams, transfer knowledge and build the ability to improve continuously.

Established experience. A sharper market position.

Vision

Organisations equipped to turn better decisions and technology into lasting public, human and business value.

Mission

We diagnose complex organisational challenges, design and implement practical solutions, and build the internal capability required to operate and improve them.

HACEY Global developed through work in programmes, research, health, stakeholder engagement, systems strengthening and social impact. Those disciplines require evidence, practical implementation and the ability to work across policy, people, data and delivery.

The organisation's current position extends that foundation into enterprise strategy, innovation, technology services, programme management and digital products for North American and European markets.

WHAT MAKES THE WORK DIFFERENT

01 Diagnose before prescribing Understand the organisation before choosing the answer.	02 Join strategy and delivery Keep decisions, design and implementation in one accountable path.
03 Design with people Use leadership, technical and frontline knowledge throughout.	04 Transfer capability Leave the client more able to own and improve the solution.

Industry context changes what a good solution looks like.

We bring cross-sector technology and transformation capability into environments with different users, risks, regulations and operating realities.

01 Healthcare and Life Sciences EHR/EMR, clinical workflow, interoperability, patient experience, telehealth, healthcare data, AI and public-health technology.	02 Financial Services Digital banking, CRM, RegTech, workflow automation, data, cloud, customer service and responsible AI.
03 Government and Public Sector Identity, case management, citizen services, public health, social services, cloud, data and programme delivery.	04 Technology Product strategy, engineering, AI, cloud architecture, enterprise platforms and operational scaling.
05 Agriculture and AgTech Farmer services, market access, programme platforms, data, AI and supply-chain workflows.	06 Education and Social Impact Learning and student platforms, grants, beneficiary systems, programme operations and digital public goods.

Begin with the problem. Design the complete response.

Our solutions connect business decisions, workflow, technology, delivery and adoption so progress does not stop at recommendation or go-live.

| 02 | Enterprise AI Adoption |
| 03 | Cloud Transformation |
| 04 | Customer Experience Transformation |
| 05 | Operational Excellence |
| 06 | Intelligent Workflow Automation |
| 07 | Data and Analytics Transformation |
| 08 | Enterprise Platform Modernisation |
| 09 | Digital Product Development |
| 10 | Technology Programme Recovery |
| 11 | Organisational Change and Adoption |

Disciplines that work together around the outcome.

We assemble the right combination for the challenge rather than forcing every engagement through a fixed service catalogue.

01 Strategy and Transformation Strategies, operating models, roadmaps, innovation and programme design.	02 Artificial Intelligence and Data Readiness, responsible AI, generative AI, data strategy, analytics and governance.
03 Cloud and Infrastructure AWS, Azure, cloud strategy, migration, modernisation and optimisation.	04 Enterprise Platforms Salesforce, Microsoft ecosystem, CRM, workflow, ERP and integration.
05 Product and Software Engineering Product strategy, UX, custom software, mobile, web, APIs and product management.	06 Programme Delivery, Change and Capability Programme leadership, PMO, governance, benefits, adoption, training and knowledge transfer.

Advisory, implementation, integration and optimisation.

Healthcare transformation must work across clinical, operational, technical, regulatory and human constraints at the same time.

01 Advisory Assess clinical and operational priorities, technology landscape, readiness, data constraints and programme risks.	02 Implementation Translate the roadmap into governed workstreams, configurations, products, integrations and release plans.
03 Integration Design secure interfaces, data flows and interoperability patterns suited to the health information environment.	04 Optimisation Measure adoption and workflow performance, address friction and build internal improvement capability.

RELEVANT AREAS

EHR/EMR systems / HL7 and FHIR interoperability / telehealth and virtual care / patient portals / population health analytics / AI-assisted clinical documentation / revenue-cycle automation / healthcare CRM / clinical workflow / public-health technology

Reusable foundations, adapted to the operating environment.

01 HACEY Pulse Programme and portfolio intelligence for leaders managing complex delivery.	02 HACEY Nexus A governed AI knowledge assistant with permission-aware retrieval and citations.
03 HACEY Care A configurable patient-engagement layer for access, communication and follow-up.	04 HACEY CaseFlow A case and compliance workflow foundation for public and regulated services.

Representative concepts

These concepts demonstrate how reusable components can combine with client-specific service, data, integration and governance needs. They do not imply existing commercial deployment or market adoption.

TECHNOLOGY ECOSYSTEM

Implementation capability across Microsoft Azure, Microsoft 365, Power Platform, Dynamics 365, Amazon Web Services, Salesforce, enterprise AI technologies, cloud-native architecture, APIs, interoperability and data platforms.

Technology references describe capability, not official partner status or certification unless separately verified.

Progress with evidence, not momentum alone.

Each stage produces a clear decision, working output or measurable improvement. Leadership, technical teams and frontline staff stay involved throughout.

01	Understand	Context and evidence
02	Diagnose	Root causes and choices
03	Design	Target state and roadmap
04	Build	Useful increments
05	Deploy	Operational release
06	Enable	Capability transfer
07	Optimise	Measure and improve

Implementation is complete when the organisation can own the change.

A solution is not fully implemented when the system goes live. It is implemented when people can use it, leaders can govern it and internal teams can improve it.

Capability transfer may include paired delivery, role design, training, playbooks, governance routines, product-management practices, technical documentation, operational handover and coaching.

RESPONSIBLE TECHNOLOGY PRINCIPLES

01 Purpose before deployment Use technology where it supports a defined human, service or organisational outcome.	02 Accountable ownership Name owners for data, controls, operation and affected decisions.
03 Proportionate risk Match evaluation, oversight and controls to the consequence of error.	04 Continuous evaluation Test, monitor, document material changes and maintain a route to pause.

A useful way to begin, and a path to continue.

01 Focused diagnostic Clarify the challenge, evidence, decisions and most valuable first move.	02 Strategy to implementation Move from roadmap through solution design, delivery, adoption and measurement.
03 Product or platform delivery Combine discovery, service design, engineering, integration and launch.	04 Programme leadership or recovery Restore delivery control, governance, coordination and confidence.
05 Embedded specialist capability Add targeted architecture, product, PMO, data or change leadership.	06 Optimisation and transfer Improve performance and strengthen internal ownership.

Bring us the challenge, not a predetermined solution.

START A DISCOVERY CONVERSATION

Define the right first move.

Tell us what needs to change, what is getting in the way and what a better outcome would look like. We will respond with a practical next step.
